

Abstract

A door opener for opening a frozen or stiff foam or rubber seal formed between a door and a door frame, which possesses first and second plate portions. The first plate portion is adapted for placement in a frame opening between the door frame and the door, and the second plate portion is adapted to be manipulated by a user, by attachment to a key chain. The first plate portion is in spaced relation to the second plate portion so as to form a substantially right angle about a central point, whereby an end of the first plate portion can be inserted for placement in the frame opening between the door frame and the door by the user, and engage a lip of the door.
